

Air Global Hungary receives first Tecnam P2006T twin

Tecnam recently appointed 50th dealer Hungary's Air Global today received its first Tecnam P2006T twin.

The 1st Hungarian Tecnam P2006T twin, registered HA-TEC was collected from Tecnam's Capua production facility, in Italy by András Schneider, Air Global's CEO and flown direct to Győr-Per Airport in Hungary.

"We were off course very delighted to be selected as Tecnam exclusive dealer for Hungary last year, especially as we were Tecnam's milestone 50th worldwide dealer" said András Schneider, CEO of Air Global. "However now that we have collected our first Tecnam P2006T twin, we now have in our possession a Tecnam demonstrator that we can promote to a very robust Hungarian General Aviation market".

"I am extremely impressed how quickly Air Global's young and dynamic team have established themselves as our 50th worldwide dealer." said Paolo Pascale, Tecnam's Managing Director. "I have no doubt our partnership will really benefit the burgeoning Hungarian General Aviation Market"

The Tecnam P2006T Next-Generation twin is a real game changer. A twin for the price of a single, that burns significantly less fuel than many singles, yet offers the improved performance and safety of a second power plant, will enables operators to offer a modern high performance twin trainer both for aspiring commercial pilots and for pilots wanting a new (or to renew a) multi-engine piston rating, all with flying at prices similar to many single engine aeroplanes"
